About Cbus Super

\$71 Billion¹ Funds under management

818K²
Total members with balance

8.88%³ Annual return since inception

200k Approx. number of employees

- ✓ Established in 1984 as one of Australia's first industry funds
- ✓ Dedicated fund for the Building & Construction and adjacent industries
- ✓ Unique competitive advantage in the property sector through Cbus property
 - ✓ Top Quartile long term Investment Performance
- ✓ Whole of fund approach to responsible investment incorporating
 ESG principles across investment decisions
- ✓ Strong historical growth in both Membership and Funds Under Management
- ✓ Recent merger with Media Super and pending merger with EISS positioning us for future growth
 - Consistently recognised as a strong performing, fund of choice through multiple award categories

- Investment Team feedback
- Our view on YFYS performance test
- Q&A

APRA YFYS Performance Test

- 8-yr annualised active return of an investment option's Net Return against APRA-defined SAA benchmark adjusted for admin fees.
 - Failed if <-50bp</p>

Pre-defined Fee and Tax rate assumption for each asset class

Currently required for MySuper products.
 Expansion to other Choice products have been paused as the methodology is under review.

Figure 2: APRA benchmarks and assumptions

Asset class	Index	Assumed fees	Assumed effective tax rate	
Australian Equity	S&P/ASX 300 Total Return Index	0.05%	0%	
International Equity (hedged)	MSCI All Country World Ex-Australia Equities with Special tax (100% hedged to AUD)	0.11%	14%	
International Equity (unhedged)	MSCI All Country World Ex-Australia Equities Index with Special Tax (unhedged in AUD)	0.09%	14%	
Australian Property (listed)	S&P/ASX 300 A-REIT Total Return Index	0.12%	14%	
International Property (listed)	FTSE EPRA/NAREIT developed ex Australia Rental 100% Hedged to AUD Net tax (Super) index	0.22%	14%	
Australian / International Property (Unlisted)	MSCI/IPD Mercer IPD Australian Monthly Wholesale Property Fund Index – Post-fee Total Return (All Funds)	0.00%	14%	
Australian / International Infrastructure (listed)	FTSE Developed Core Infrastructure Index 100% Hedged to AUD Net Tax (Super) index	0.26%	14%	
Australian / International Infrastructure (Unlisted)	MSCI Australia Quarterly Private Infrastructure Index (unfrozen) – Post Fee Total Return (All funds)	0.00%	14%	
Australian Fixed Interest	Bloomberg Ausbond Composite 0+Yr Index	0.10%	15%	
International Fixed Interest	Bloomberg Barclays Global Aggregate Index (hedged to AUD)	0.10%	15%	
Australian Cash	Bloomberg Ausbond Bank Bill Index	0.04%	15%	
International Cash	Bloomberg Ausbond Bank Bill index	0.04%	15%	
Other (assets categorized as Other / commodities)	Composite of: 25% of benchmark for International Equity (hedged), 25% of benchmark for International Equity (unhedged), 50% of benchmark for International Fixed Interest	0.10%	0.145%

To shadow APRA's calculation

- To track fund's performance against the test on more timely basis and alert internal stakeholders if the fund's performance gets close to failing the test
- To produce performance test forecast and conduct what-if and scenario analysis
- The internal model to calculate the test typically starts with Excel

Why calculate the test internally?

- To understand underlying drivers of test results:
 - Understanding the benchmark mismatch

Which asset class contributed/detracted

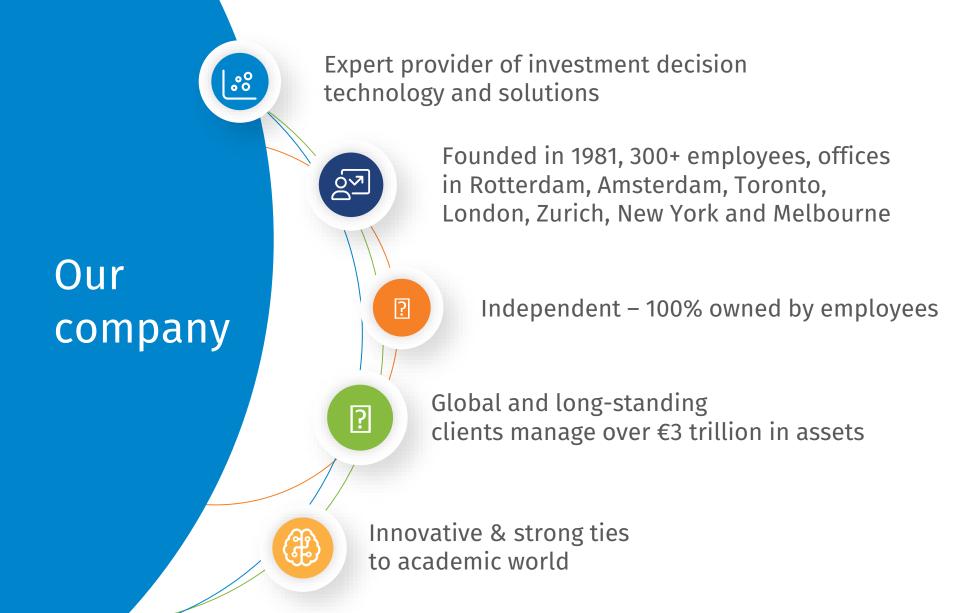

Which asset allocation decision contributed/detracted

 Understanding the fund's tax efficiency/inefficiency

Excel model is no longer sustainable

Why did we want to build an attribution?

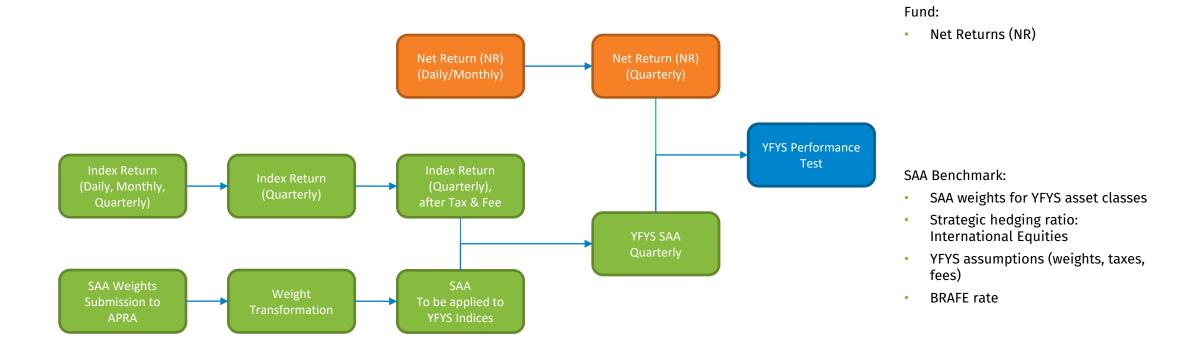

What is your challenge?

International Equity	-2.8701%	-5.6306%	2.7605%	0.1570%	0.9019%	1.0589%

- Interaction is combined with the selection effect
- Both PF and BM return are 100% virtually hedged to ensure a fair comparison
- Allocation/Selection breaking down to asset class levels provides additional insights

YFYS Attribution - Reflection

- Multiple variations of YFYS SAA benchmarks are introduced
 - Constructed with PEARL's benchmark composite tooling
 - Allows for more frequent YFYS SAA returns (daily/monthly) with tax/fee assumption applied in consistent with APRA assumptions
- Various flavours of asset class level returns are required for the attribution model
 - Net-of-fee, Net/Gross-of-tax, notionally hedged return
 - These are calculated directly in PEARL and fed straight to the attribution model → much less maintenance
- Reconciliation between bottom-up asset class returns v.s. NIR
 - Quality of data would drive the size of residuals
 - Residual is quantified in the attribution analysis
- Overlays at Option level, such as currency overlay
 - Taking currency impact out from the market implementation
- Historical changes in asset class structures, currency hedging strategies are taken into consideration in the model
- Attribution allows for more frequent analysis than quarterly over since-inception horizon

From Performance team:

- Accuracy is very high, results in line with the official published outcome
- Maintenance is very low
- Timely and Production ready reporting

From investment team:

- Enough level of granularity
- Attribution helped the investment team understanding drivers of the test results
- Provides meaningful input into SAA construction and Asset
 Class benchmark selection review

Feedback from Cbus teams

- The test should be longer (ideally at least 10 years).
- More asset classes should be used for example including emerging market equities that is a standard SAA component for many funds
- SAA data should be collected more frequently than quarterly to capture SAA changes that don't occur exactly on quarter end
- The test should capture the SAA construction. SAA drives the vast majority of returns over the long-term, but is ignored in this test.
